Detailed explanation of intelligent PDU（Smart PDU） function modules

TCP/IP remote intelligent (monitoring + control) type PDU:

1. Compatible with IP, TCP, UDP, SNMP, ModBus/, Telnet, HTTP and other protocols.

2. Remote monitoring of power consumption data + remote on and off + built-in WEB

3. Monitoring: voltage, total current, partial current, alarm status, temperature and humidity values, equipment and other information.

4. Control: Each port switch is independently controlled, sequential on and off, timed on and off, threshold on and off

5. Setting: current alarm threshold, overvoltage alarm threshold, undervoltage alarm threshold.

6. Over-threshold alarm method: SMTP email alarm

7. Range: 0.01A-63A0.1V-400V (applicable to AC and DC)

8. Effective accuracy: current 0.01, voltage 0.1

9. Color LCD display

10. Equipped with Modbus-RTU\Modbus-TCP communication connection.

11. It is hot-swappable, and the smart meter can be pulled out without affecting the normal power consumption of the PDU.

TCP/IP remote intelligent (three-phase monitoring) type PDU:

1. Compatible with IP, TCP, UDP, SNMP, ModBus/, Telnet, HTTP and other protocols.

2. Remote monitoring of power consumption data + remote on and off + built-in WEB

3. Monitoring: voltage, total current, partial current, alarm status, temperature and humidity values, equipment and other information.

4. Setting: current alarm threshold, over-voltage alarm threshold, under-voltage alarm threshold.

5. Over-threshold alarm method: SMTP email alarm

6. Measuring range: 0.01A-63A0.1V-400V (applicable to AC and DC)

7. Effective accuracy: current 0.01, voltage 0.1

8. Color LCD display

9. Equipped with Modbus-RTU\Modbus-TCP communication connection.

10. It is hot-swappable, and the smart meter can be pulled out without affecting the normal power consumption of the PDU.

IDCPDU

Ningbo DCDU Power Distribution Equipment Co.,Ltd.

Add: No.6 industrial Road, Zhangqi Town, Cixi City, Ningbo, Zhejiang Province, China
